TRIDENT[®]

The Next Logical Step.[™]

*Don't be fooled by the statement,
"If it's fire-resistant, it's water-resistant."*

95% of all fires have water present. With water comes water damage, which can be a more common, and more serious threat to your valuable records than the actual fire itself. In the event your files are in a different location than where fire is present, your files may still be subject to devastating water damage as a result of sprinkler and/or extinguisher spray. Schwab Corp. is the first and only fireproof file manufacturer to address this issue. After achieving excellence in fire and theft protection, we took the Next Logical Step™ and developed a revolutionary design to provide superior resistance to water. We bring you **TRIDENT®**.

Step One: Superior Design

Schwab's exclusive contemporary design safeguard's against water damage. Our unparalleled seamless construction, coupled with an inner steel vault, is the only design that makes forced entry impossible to conceal, as well as offers maximum fire protection. This seamless outer wrapper, along with a sealed back panel, also prevents entry of water.

Step Two: Superior Materials

Insulite™, the most efficient insulation in the industry, is the substance used to insulate the fireproof file against fire and heat damage. Insulite™ is cleaner and lighter weight than insulation used by competitors, and it does not absorb water. This directly prevents contact of water to your files through decomposed insulation in the event of water damage. Going back to our inner steel jacket, further water damage is prevented to consecutive drawers, even if one drawer is left open. Each drawer and its steel liner combine to make individual vaults.

TRIDENT® *The Next Logical Step.™*

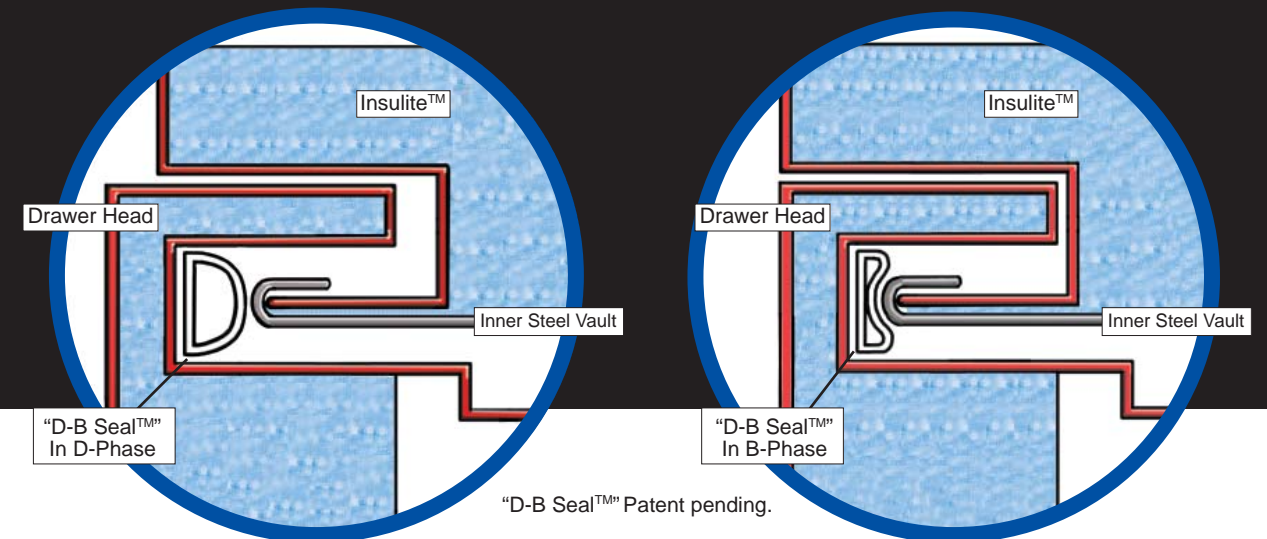

Step Three: Superior Innovation

We started with a superior construction design, then utilized our superior insulation material. Now we can further extend our water resistance protection by adding a seal which further safeguards against the perils of water damage.

Schwab Corporation is proud to announce the creation of our revolutionary "D-B Seal™" which makes our files virtually impenetrable by water spray. The seal is made of a premium high temperature material, applied to the joint where the drawer head, the outer cabinet, and the inner steel vault meet, creating unprecedented water resistance.

If your files are worth the extra protection, the Next Logical Step™ is **TRIDENT®**.

Cross-section of drawer head joint in open position with D-B Seal™ in "D-Phase"

Cross-section of drawer head joint in closed position with D-B Seal™ in "B-Phase"

Independently tested by Intertek to Schwab Corp. specification: **File Cabinet Water Resistance Standards, Edition 1.0, 10/10/2007.** Intertek is accredited by the American Association for Laboratory Accreditation (A2LA). Contact Schwab Corp. for more information.

- A** Superior seamless construction with use of inner steel drawer vault.
- B** Superior Insulite™ lightweight, water and fire resistant, insulation material.
- C** Point of application of TRIDENT® seal, The Next Logical Step™ in water protection.
