* When locked inside a standard Class 350°-1 Hr. file

The Little Box With a **Big** Advantage

In today's rapidly advancing multimedia world, the need for protective computer media storage is a primary concern. The inside storage capacity of the **SCHWAB**[®] *Media COOLER*[®] is about **18% greater** than that of similar products, but weighs **84% less**. Portability and ease of use have become important issues. The Schwab Media COOLER was designed around the happenings of a modern office. Because it weighs only **15 lbs.**, it can be easily transported by even the smallest associate. Many businesses purchase separate COOLERS for different departments, or for workers who are transferred between rotating workstations. The spring-loaded latch automatically seals the COOLER when the lid is closed, and eliminates the frustration of fumbling with separate keys or locks.

The ability to store the COOLER inside a safe or file offers unparalleled protection. This combination provides superior security when compared to a stand-alone model, which is more susceptible to theft. The COOLER'S smaller exterior dimensions allow two Media COOLERS to be placed in a standard Schwab Series 5000 vertical insulated file drawer, and a Series 5000 lateral file drawer can hold up to three COOLERS. When Schwab's Media COOLER is stored in a standard Class 350°-1 Hr. insulated file, it will maintain the necessary environment for media (below 125° and not above 80% humidity) and cannot be accessed without damaging the safe or file in which it is secured.

Other media storage products cannot fit in most standard files. Because of their weight, (75 lbs.!), they are not as portable and also not easily stored in a large safe or file; therefore, these products are more vulnerable to theft.

When you consider your media protection requirements, and today's office environment, the Little Box has a **Big** Advantage.
